

Scope of Work – Vehicle Body Fabrication

The contractor shall carry out complete fabrication of a vehicle body for company use in accordance with approved drawings and specifications. The scope includes supply of materials, cutting, forming, welding, assembly, surface finishing, and fitment of the body onto the vehicle chassis.

Work shall include fabrication of the body structure, panels, floor, doors, hinges, locks, and mounting brackets. All welding shall be performed by qualified personnel, ensuring proper alignment, strength, and durability.

Surface preparation, anti-rust treatment, priming, and painting in the company-approved color and finish shall be included. The fabricated body shall be trial-fitted, inspected, and tested for proper fit and functionality prior to delivery.

The contractor shall ensure quality workmanship, compliance with safety standards, and timely delivery of the completed vehicle body ready for operational use.
